**PRESENTATION OF  
DRAFT TASK 4 REPORT  
- CASE STUDY OF GENERIC POINTS  
METHODOLOGY APPLIED TO DATA STORAGE  
PRODUCTS**

---

**Jan Viegand, 10/03/2017**

# INTRODUCTION

- » Aim: Apply
- » 1: Test
- » 2: Assess
- » Data storage theory on
- » Many iterations
- » Large technical

## Technical assistance study for the assessment of the feasibility of using "points system" methods in the implementation of Ecodesign Directive (2009/125/EC)

### TASK 4 Case study: Data Storage Systems

*Draft report v1*

# DATA STORAGE PRODUCTS AND THEIR ENVIRONMENTAL IMPACT

## The Data Storage Product

Storage media

Storage controllers

Network interfaces

Software

Scope: Online 2, 3, 4: Typical enterprise and data centre storage

# DATA STORAGE PRODUCTS AND THEIR ENVIRONMENTAL IMPACT

## Environmental impact of data storage

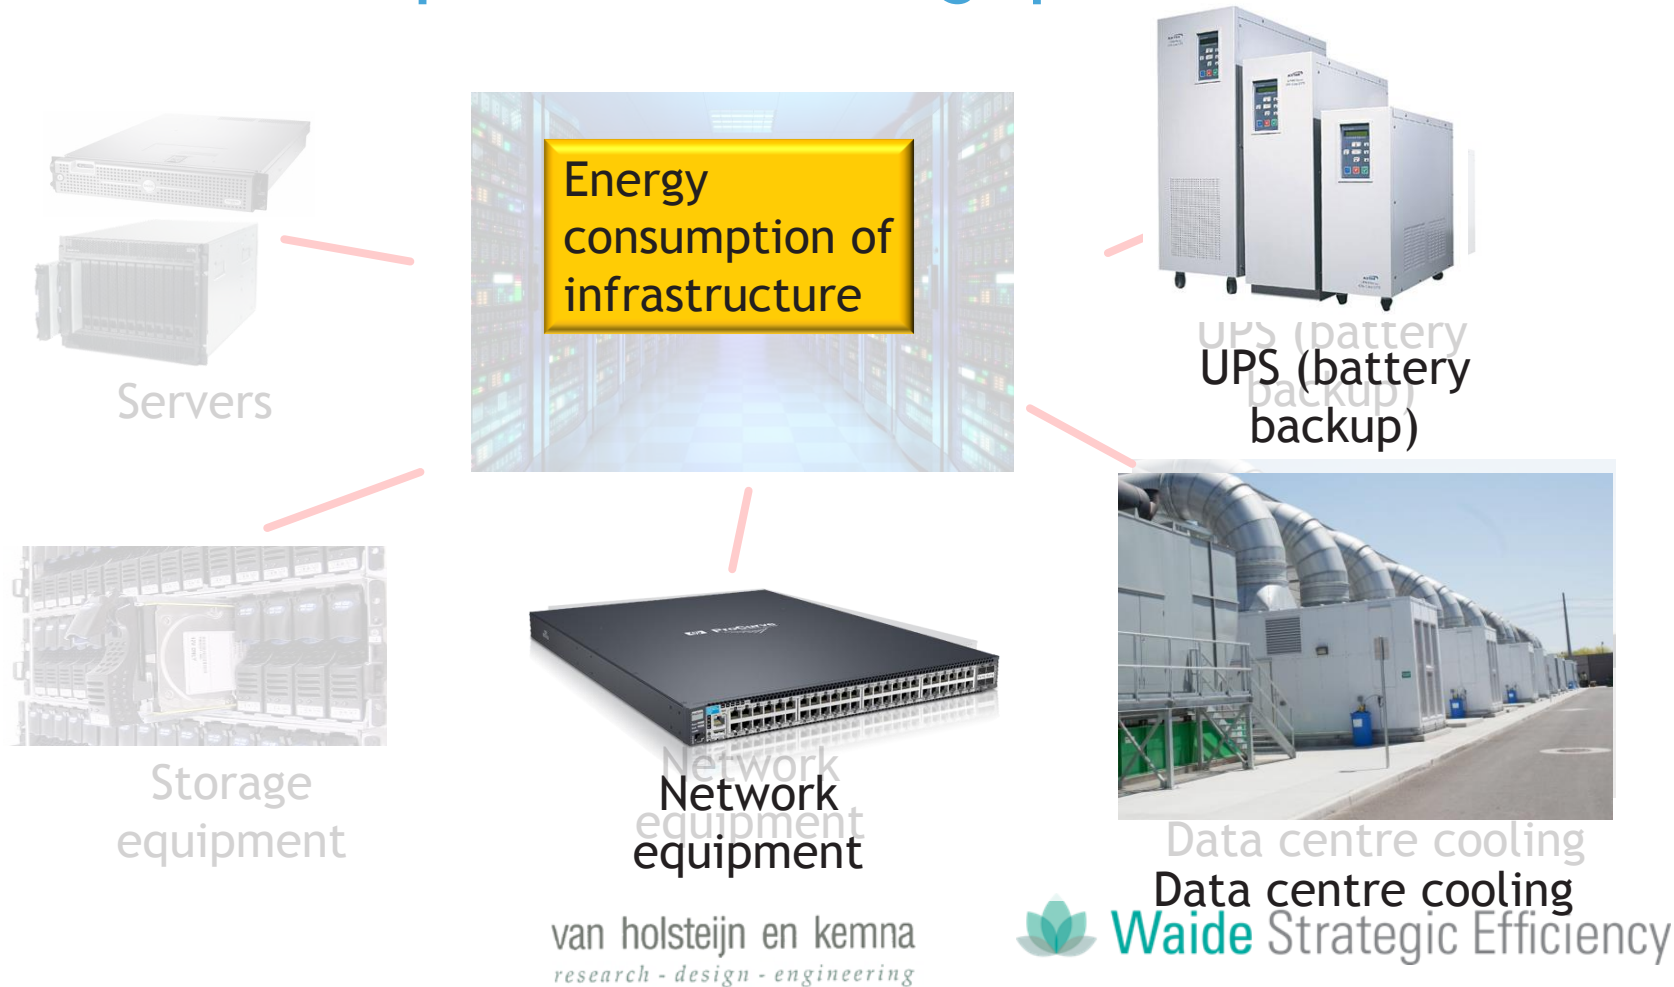

# DATA STORAGE PRODUCTS AND THEIR ENVIRONMENTAL IMPACT

## Environmental impact of data storage products

# DATA STORAGE PRODUCTS AND THEIR ENVIRONMENTAL IMPACT

## Environmental impact of data storage products

# DATA STORAGE PRODUCTS AND THEIR ENVIRONMENTAL IMPACT

## Environmental impact

- » In-use electricity consumption:
  - » Now: 15 TWh/year (incl. infrastructure 27 TWh/year)
  - » 2030: 30 TWh/year (incl. infrastructure 47 TWh/year)
- » Material environmental impact

# WHY DATA STORAGE PRODUCTS FOR POINTS SYSTEM

- » Mix of quantifiable and qualitative product ecodesign features - smaller and larger
- » Difficult to translate each ecodesign feature into regulation
- » Complex to apply a rigorous performance assessment method
- » Point system to provide a compromise for an improved eco-design product

## REGULATION AND SCHEMES

### DG GROW Lot 9 - Enterprise servers, data storage and ancillary equipment - Potential ecodesign requirements

- » PSU efficiency and power factor
- » Material efficiency
- » Operation Condition Class

# REGULATION AND SCHEMES

## DG GROW Lot 9 - Enterprise servers, data storage and ancillary equipment - Potential ecodesign requirements

- » PSU efficiency and power factor
  - » Requirements: Min. efficiency at 20%, 50%, 100 % & min. PW
  - » Information: Eff. at 10%, 20%, 50%, 100% & PW
- » Material efficiency
- » Operation Condition Class

# REGULATION AND SCHEMES

## DG GROW Lot 9 - Enterprise servers, data storage and ancillary equipment - Potential ecodesign requirements

- » PSU efficiency and power factor
- » Material efficiency
  - » Requirement:
    - » Joining or sealing technique
    - » Documenting the sequence of dismantling operations
    - » Built-in software based data deletion tool(s)
    - » Latest version of firmware available
  - » Information
    - » Disassembly, recycling and disposal at end-of-life
    - » Instructions on how to remove components
    - » The data deletions tool(s)
    - » The latest firmware version
    - » Weight and where of 3 critical raw materials

- » Operation Condition Class

# REGULATION AND SCHEMES

## DG GROW Lot 9 - Enterprise servers, data storage and ancillary equipment - Potential ecodesign requirements

- » PSU efficiency and power factor
- » Material efficiency
- » Operation Condition Class
  - » Information: A1-A4 (temperature, humidity etc. intervals)

## ENERGY STAR

Data Centre Storage v1.0, March 2014 (not adopted EU)

- » Power supply (efficiency & power factor)
- » Power modelling presale tool (selected systems)
- » Energy efficiency feature:
  - » Adaptive active cooling
  - » For online 3 and 4 products, at least 1 COM (Capacity Optimizing Method)
- » Information Reporting (technical data, test data, EE performance)
- » Performance data measurement & output

## SNIA Green Storage Initiative

- » Storage Networking Industry Association
- » SNIA Emerald™ Program (test energy & performance)
- » Developed in collaboration with ENERGY STAR

# REGULATION AND SCHEMES

## ASHRAE thermal guidelines for data centers

Thermal classes (+ humidity etc.)

- » A1: 15-32 °C
  - » A2: 10-35 °C
  - » A3: 5-40 °C
  - » A4: 5-45 °C
- 
- » Data on reliability, energy consumption, noise vs temp.
  - » Less restrictions, more free cooling, reduced energy cons.

## CASE STUDY DISCLAIMER

This is an illustrative case study - not final proposal

- » Used existing limited data for Data Storage
- » We have made assumptions
- » We propose weightings... based on judgements
- » We present briefly the methodology
  - there are many details
- » We had limited resources, but we have a result for discussions

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Target

- » Award points to the product relative to a reference product
- » Based on calculation of environmental impact budget for the product
- » Points can be used for regulation

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 1 Assessment of key lifecycle stages

- » In-use electricity consumption for the storage system
- » In-use electricity consumption for DC (cooling, UPS, network equipment and power distribution units)
- » Material for the production and the production processes
- » End-of-life treatment

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

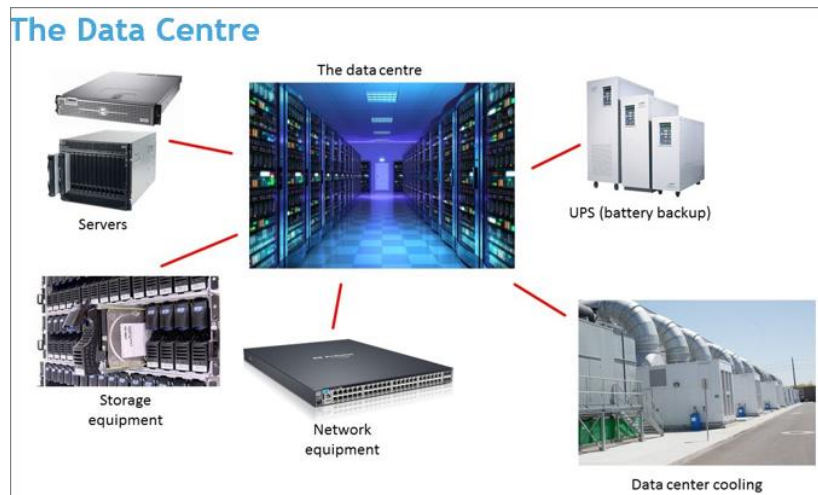

## Step 2 Assessment of product scope boundaries and associated impacts at the wider (extended product or product-system) level

### » Extended product

- » Varying loads on the data storage directly related to usage pattern

### » Product-system

- » Impact on the DC (cooling, UPS, network equipment and power distribution units)

holsteijn en kemna  
ch - design - engineering

**Fraunhofer**

 **Waide** Strategic Efficiency

  
energy people

  
**vito**

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

Step 3 Selection of environmental impact criteria

Step 4 Determination of the phases at which product design may influence lifecycle impacts

Most important criteria:

- » Electricity consumption during the use phase on the product system level
- » Material efficiency are the most important environmental impact criteria the points-system should target

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 5 Assessment of whether a points system approach is potentially merited or not

- » Q: Mix of quantifiable (cardinal) and more qualitative product eco-design features?
- » A: Yes. E.g. energy performance & minimum operating condition
- » Q: Difficult to determine the relative importance of benefit of ecodesign features?
- » A: For some of the features yes such as min. oper. condition
- » Q: Performance assessment method too complex, but a points-based system could provide compromising requirements?
- » A: DS systems are complex and difficult to test for all use patterns. Points-system may be a way forward

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 6 Assessment of the implications of product modularity

- » Mainly size and configuration
- » For size modularity, points to be allocated for modules

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 7 Assessment of the implications of product performance sensitivity to the final application

- » Main application: Store and retrieve data
- » Main sub-category applications (DS optimised for these):
  - » Transactional applications: Most common: Small, random data transactions. E.g. databases, web servers
  - » Streaming applications: Reading and writing large files and blocks of data in sequence. E.g. backup/recovery, streaming media files
  - » Capacity applications: Store very large amount of data. E.g. less accessed backup etc.
- » Different applications and different performance definitions and measurement methods

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 7 Assessment of the implications of product performance sensitivity to the final application

- » Transactional applications
- » Streaming applications
- » Capacity applications

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 8 Determination of environmental impact budgets

### Included:

1. Energy performance of the product
2. Energy efficiency feature - COMs
3. Energy efficiency feature - Minimum operating condition
4. Energy efficiency feature - Good Commissioning Guidance

### Not included:

- » Power supply efficiency (proposed Lot 9)
- » Power modelling presale tool available (typical)
- » Energy efficiency feature - Adaptive active cooling (standard)
- » Material efficiency (proposed Lot 9)

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

Step 8 Determination of environmental impact budgets

Step 9 Normalisation and awarding of points

1. For each application (transactional, streaming, capacity)
2. Results of each workload test are weighted to total performance
3. Adjusted for EE features (COMs, oper. cond., commissioning)
4. Inverted figures to correspond to index
5. Normalisation (reference: EEI = 100 %)
6. Points (EEI = 100% > 0 points)
7. All above for excl. 10 % highest performing products (assumed to be cost-ineffective)

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 8 Determination of environmental impact budgets - Energy performance

- » Reference case (average energy performance)
- » Ecodesign option 1 - optimised for hot band performance (transactional applications)
- » Ecodesign option 2 - optimised for sequential read performance (streaming applications)
- » Ecodesign option 3 - optimised for sequential write performance (streaming applications)
- » Ecodesign option 4 - optimised for ready idle performance (all applications)
- » Ecodesign option 5 (BAT) - highest overall performance
  
- » Calculation of total performance (our weightings)
  1. Transactional
  2. Streaming
  3. Capacity

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Workload test

- » Transactional applications:
  - » Hot band workload test IOPS/W
  - » Ready idle capacity GB/W
  
- » Streaming applications
  - » Sequential read workload test MiBPS/W
  - » Sequential write workload test MiBPS/W
  - » Ready idle capacity GB/W
  
- » Capacity applications
  - » Ready idle capacity GB/W

IOPS = input output operations per second

MiBPS = 1,048,576 bytes per second

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Workload test weighting

	Hot band workload test IOPS/W	Seq read workload test MiBPS/W	Seq write workload test MiBPS/W	Ready Idle workload test GB/W
Transactional applications	37.5%	0%	0%	62.5%
Streaming applications	0%	22%	11%	67%
Capacity applications	0%	0%	0%	100%

IOPS = input output operations per second

MiBPS = 1,048,576 bytes per second

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Calculation of energy budget

### Transactional Applications

	Hot band workload test (IOPS/W)	Seq read workload test (MiBPS/W)	Seq write workload test (MiBPS/W)	Readily idle capacity workload test (GB/W)	Total performance
Reference case	6.6			97.1	63.2
Ecodesign option 1a (BAT Hot band workload test)	157.0			94.5	117.9
Ecodesign option 2a (BAT Seq read workload test)					n/a
Ecodesign option 3a (BAT Seq write workload test)					n/a
Ecodesign option 4a (BAT Readily idle workload test)	8.4			588.1	370.7
Ecodesign option 5a (BAT Total Performance Score)	8.4			588.1	370.7

Reference: 6.6 IOPS/W (hotband) + 97.1 GB/W (ready idle)  
 $\gg 37.5\% \times 6.6 + 62.5\% \times 97.1 = 63.2$

Hot band workload test: 1 IOPS/W corresponds to 1 point  
 Ready idle capacity workload test: 1 GB/W corresponds to 1 point

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 8 Determination of environmental impact budgets - Energy efficiency feature - COMs

- » COMs: Deduplication, thin provisioning, delta snapshots, compression (all assumed applied)
- » Increase capacity for same raw capacity = same power consumption > improves ready idle performance
- » Improvement of eco-design options 1-5 (estimated):
  1. Transactional: 40% (like cap., but also I/O)
  2. Streaming : 17% (often incompr. data)
  3. Capacity: 45% (largest optimisation, cap. only output factor)

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Energy budget with COMs

### Transactional Applications

	Hot band workload test (IOPS/W)	Seq read workload test (MiBPS/W)	Seq write workload test (MiBPS/W)	Ready idle capacity workload test (GB/W)	Total performance
Reference case	6.6			97.1	63.2
Ecodesign option 1a (BAT Hot band workload test)	157.0			94.5	117.9
Ecodesign option 2a (BAT Seq read workload test)					n/a
Ecodesign option 3a (BAT Seq write workload test)					n/a
Ecodesign option 4a (BAT Ready Idle workload test)	8.4			588.1	370.7
Ecodesign option 5a (BAT Total Performance Score)	8.4			588.1	370.7
Ecodesign option 6a (case 5a including COMS)	8.4			823.3	517.7

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Energy budget with COMs - Inverted

### Transactional Applications

	Total performance	Inverted total performance
Reference case	63.2	0.01583
Ecodesign option 1a (BAT Hot band workload test)	117.9	0.00848
Ecodesign option 2a (BAT Seq read workload test)	n/a	n/a
Ecodesign option 3a (BAT Seq write workload test)	n/a	n/a
Ecodesign option 4a (BAT Ready Idle workload test)	370.7	0.00270
Ecodesign option 5a (BAT Total Performance Score)	370.7	0.00270
Ecodesign option 6a (case 5a including COMS)	517.7	0.00193

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 8 Determination of environmental impact budgets

### - Energy efficiency feature - Minimum operating condition

- » Technical improvement of data storage
- » Wider range of temperature and humidity
- » > More free cooling - less mechanical cooling
- » Average reduction 4 %

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Energy budget incl. power and cooling

Transactional Applications (excl. top 10%)			
	Product performance	Power and cooling performance	Combined total (sum of the values of prod perf + pow. and cool perf)
Reference case	0.01583	0.01055	0.02639
Ecodesign option 1b (BAT Hot band workload test)	0.02306	0.01537	0.03843
Ecodesign option 2b (BAT Seq read workload test)	n/a	n/a	n/a
Ecodesign option 3b (BAT Seq write workload test)	n/a	n/a	n/a
Ecodesign option 4b (BAT Ready Idle workload test)	0.00949	0.00633	0.01581
Ecodesign option 5b (BAT Total Performance Score)	0.00994	0.00663	0.01657
Ecodesign option 6b (case 5b including COMS)	0.00725	0.00483	0.01208
Ecodesign option 7b (case 6b but with higher Minimum Operating Condition)	0.00725	0.00464	0.01189

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Step 8 Determination of environmental impact budgets

### - Energy efficiency feature - Good Commissioning Guidance

» Estimated 3 % improvement

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Energy budget incl. good commissioning guidance

Transactional Applications (excl. top 10%)	
	<b>Energy</b>
Reference case	0.02639
Ecodesign option 1b (BAT Hot band workload test)	0.03843
Ecodesign option 2b (BAT Seq read workload test)	n/a
Ecodesign option 3b (BAT Seq write workload test)	n/a
Ecodesign option 4b (BAT Ready Idle workload test)	0.01581
Ecodesign option 5b (BAT Total Performance Score)	0.01657
Ecodesign option 6b (case 5b including COMS)	0.01208
Ecodesign option 7b (case 6b but with higher Minimum Operating Condition)	0.01189
Ecodesign option 8b (case 7b but with good commissioning guidance)	0.01153

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Normalisation and points - Results

Transactional Applications (excl. top 10%)	EEI	Points
Reference case	100%	0
Ecodesign option 1b (BAT Hot band workload test)	146%	-45.7
Ecodesign option 2b (BAT Seq read workload test)	n/a	n/a
Ecodesign option 3b (BAT Seq write workload test)	n/a	n/a
Ecodesign option 4b (BAT Ready Idle workload test)	60%	40.1
Ecodesign option 5b (BAT Total Performance Score)	63%	37.2
Ecodesign option 6b (case 5b including COMS)	46%	54.2
Ecodesign option 8b (case 6b but with higher Minimum Operating Condition)	45%	55.0
Ecodesign option 10b (case 8b but with good commissioning guidance)	44%	56.3

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Normalisation and points - Results

Streaming Applications (excl. top 10%)		
	EEI	Points
Reference case	100%	0
Ecodesign option 1b (BAT Hot band workload test)	n/a	n/a
Ecodesign option 2b (BAT Seq read workload test)	175%	-75.2
Ecodesign option 3b (BAT Seq write workload test)	175%	-75.2
Ecodesign option 4b (BAT Ready Idle workload test)	26%	74.1
Ecodesign option 5b (BAT Total Performance Score)	51%	48.7
Ecodesign option 6b (case 5b including COMS)	44%	56.0
Ecodesign option 8b (case 6b but with higher Minimum Operating Condition)	43%	56.7
Ecodesign option 10b (case 8b but with good commissioning guidance)	42%	58.0

# PROPOSAL FOR AN ECO-DESIGN POINTS SYSTEM

## Normalisation and points - Results

Capacity Applications (excl. top 10%)	EEI	Points
Reference case	100%	0
Ecodesign option 1b (BAT Hot band workload test)	n/a	n/a
Ecodesign option 2b (BAT Seq read workload test)	n/a	n/a
Ecodesign option 3b (BAT Seq write workload test)	n/a	n/a
Ecodesign option 4b (BAT Ready Idle workload test)	52%	47.9
Ecodesign option 5b (BAT Total Performance Score)	52%	47.9
Ecodesign option 6b (case 5b including COMS)	36%	64.1
Ecodesign option 8b (case 6b but with higher Minimum Operating Condition)	35%	64.7
Ecodesign option 10b (case 8b but with good commissioning guidance)	34%	65.7

# CALCULATION GUIDE

## 1. Product performance

1. SNIA Emerald / ENERGY STAR test results
2. COMs: Adjust Ready Idle test
3. Calculate weighted arithmetic mean  
= Prod. perf. for transactional, streaming, capacity

## 2. Product energy budget

1. Inverse of the product performance =  $1/\text{prod. perf.}$

## 3. Total energy budget including power and cooling

1. PUE x energy budget  
 $\text{PUE} = 5/3$  for ASHRAE 1 or 2  
 $\text{PUE} = 5/3 \times 0.96$  for ASHRAE 3 or 4

## 4. Guidance total energy budget

1. Yes: Total energy = Step 3 total energy x 0.97

## 5. EEI and points

1.  $\text{EEI} = \text{Total energy} / \text{reference case total energy}$
2. Points =  $1 - \text{EEI}$

# MARKET SURVEILLANCE

## 3 levels:

- » Technical Documentation
- » Calculate based on SNIA / ES data
- » Test the products
  - » SNIA recognised tester program
- » Good Commissioning Guidance: Subjective judgement
- » Market Surveillance is possible

# CONCLUSION

- » Think it is possible to develop it into a real points system
- » More test data for varied selection of data storage
  - using existing test methodology
- » Look more into the weightings
  - with industry input and expert judgements
